

Air pollution toolkit for GPs and Practice Nurses

Air pollution can be damaging to everyone's health, especially for children with asthma. In the UK every year it causes 20,200 respiratory and cardiovascular hospital admissions and up to 36,000 deaths.

NHS North East London, together with Global Action Plan, have designed resources and training to provide you with the tools to talk to families and support children with respiratory conditions and **reduce their exposure to air pollution**.

The materials have been co-designed with local children, families and health professionals and can be found on our website: www.eastlondonhcp.nhs.uk/air-pollution. You can also find the resources on EMIS, SystmOne or equivalent.

We're asking you to watch the short 8-minute online training video and share information regarding air pollution with children, young people and their families, to help make them understand how they can reduce their exposure. The resources are helpful for everyone, not just those with asthma.

All north east London Boroughs are named air quality management areas, meaning they have high levels of air pollution. Out of the 10 places in the UK with the highest number of deaths related to air pollution, 7 of those are in north east London.

Our **Air Pollution and You checklist** is a simple way for children and families to see what actions they can take to help reduce their exposure to air pollution.

The Air Pollution and You checklist can be saved on your desktop and send to patients by text message.

The table below sets out the resources available to you as a professional, and those available to your patients and their families.

There is also pre-written copy and links that you can share in clinical updates, patient text messages or your website.

Many thanks in advance for undertaking the training and sharing these resources with your patients and their families.

If you have any questions regarding the resources available, please contact: nelondon.teamchildhealth@nhs.net

Air Pollution & You

Air pollution can worsen asthma symptoms including coughing, wheezing and breathlessness. The actions below can help:

1

Discover the side streets

Use quieter roads and paths to keep away from heavy polluting traffic.

2

Leave the car behind

Encourage your whole family to walk, cycle and scoot more - air pollution can be higher inside a car than outside.

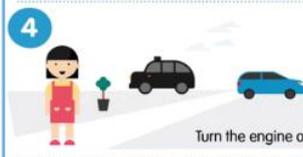

3

Check the pollution forecast

Sign up at AirText.info to get air pollution alerts sent to your phone.

4

Turn the engine off

If you do need to use a car, ask the driver to turn the engine off when the car isn't moving.

5

Keep the air clean inside too

Use fragrance free and low-chemical cleaning products. Stop air pollution collecting in your home by using extractor fans and opening windows away from busy roads.

For more information on how air pollution can affect your health, and how to reduce your exposure, visit www.cleanairhub.org.uk/tower-hamlets

Resources available
